- 📍 Sta. Filomena, Alegria, Cebu 6030

Education

Bachelor of Science in Information
Technology

Cebu Technological University –
Ginatilan Extension Campus

4th Year | Expected
Graduation 2027

Skills

- Accounting literacy applied to software
- Supabase (PostgreSQL)
- Quality Assurance
- Flutter/ Dart
- REST APIs

Language

- English
- Filipino / Cebuano

About Me

4th-year BSIT student and full-stack developer with 3 years of hands-on experience building cross-platform mobile and web applications. Skilled in Flutter mobile development, Supabase/Firebase backends, and IoT hardware integration with ESP32 and Orange Pi. Built and deployed PisoGen, a complete IoT kiosk management platform spanning mobile app, cloud backend, admin web portal, and embedded hardware. Comfortable owning a project end-to-end, from database design to UI to device-level integration.

PROJECTS

PisoGen — Coin-Operated Kiosk Management System

Personal Project · Ongoing / Improving

- Designed and built a full-stack IoT platform for coin-operated internet/gaming shops (pisonet), where customers insert coins to purchase timed device sessions that auto-lock on expiry.
- Developed the Android kiosk client using Device Owner mode and Lock Task Mode, with a real-time countdown timer displayed as a floating overlay across all apps.
- Programmed an Orange Pi single-board computer in Python to read coin-slot pulses via GPIO and relay coin credits to the cloud API in real time.

DSWD SLP — Sari-Sari Store Management App

School Project

- Contributed to a cross-platform mobile inventory and financial management app built for the DSWD Sustainable Livelihood Program to help sari-sari store owners manage stock, sales, credit, and finances.
- Built inventory and stock-in features including lot tracking, FIFO-based stock lots, batch terms, and low-stock indicators using SQLite (sqflite) for local persistence.
